

A Method and System for Dynamically Dispatching  
Function Calls From a First Execution Environment to a  
Second Execution Environment

ABSTRACT OF THE DISCLOSURE

- 10 A method for enabling a first software program  
using a first binary specification in a first execution  
environment to employ a limited functionality of a  
second software program using a second binary  
specification in a second execution environment first  
creates a bridge in the first execution environment.  
15 Using the bridge, a proxy wrapping an interface to the  
limited functionality of the second software program in  
the second execution environment is created in the  
first execution environment. The proxy is used to  
access the limited functionality of the second software  
20 program in the second execution environment.
